(WORKER) WORKER PROTECTION STANDARD AGRICULTURAL WORKER INTERVIEW QUESTIONNAIRE

Inspection # (if interview related to an inspection): 092010 BD901
Name of Establishment: Coulter Farms LLL
Date of Interview: 09-20-10
of Workers Interviewed: 5, all from Mexico.
Were workers accompanied by employers during interview? The No
Interview Conducted offsite
PESTICIDE SAFETY TRAINING
1. Do you know what a pesticide/poison is? Yes No
Ask them to briefly explain. themical to control ingests
2. Were you given pesticide-related instructions before you started working on this farm? The Yes I No
3. Did you receive pesticide safety training? ✓ Yes □ No
If yes what type of training did you receive? movieflip chart (bring a picture of a flip chart)lecturehandbook
4. Was the training in your native language? Wes No
5. Was an interpreter available during the training? Yes No
6. Where did you receive the training? Farm House Office
7. When did you receive the training?During workAt lunchAfter work?
8. Do you know who trained you? Ves \(\text{No Hyes, who? David Corulter} \)
9. When you were trained, were you taught about how to wear special clothes (PPE) such as gloves, boots, coveralls, mask) Yes No
10. When you were trained, were you taught about heat stress (eg. how to know when you've been in the heat for too long, how to avoid heat stress or what to do if you feel sick from it)? The second No
11. (Show sample worker ID card) Were you given a card like this to show that you were trained? ☐ Yes PNo
Do jou know of any another documentation that proves you received the required training? The JNo Signed a roster
12. (Show the safety poster) Where is the safety poster located?BarnGarageOfficeHouse
13. (Show ar example of application records) Has anyone ever showed you where these records are kept? Wes D No If yes, where are they located? BarnGarageOfficeHouse

NOTIFICATION
14. Do you know where the signs are posted about pesticides that have been used recently? Yes No
Who poss the signs? Jeffrey Hall David Coulter
Who pous the signs? Jeffrey Hall David Coulter
15. Are you told about areas that have been treated with pesticides? The No
How are you told?SignsOral warningBoth
16. Who tells you when you get oral warnings? Is it the same person that posts the signs? Devices I No
William darthy posithem? Defore spraying fields
17. Are signs and oral warnings in your native language? Pres PNo
Inspector note how warnings are communicated to non-English speaking workers. Hey all
speak broken English
18. (Show warning REI sign.) Do you understand what this sign means? The No
If yes, do you pay attention to the warning signs and not enter or cross the fields? O Yes \sum No
19. Are you told when to stay out of treated areas? Wes INo
20. Are the labels for the pesticides available for you to read? Yes No
A. Are the labels in a language you can understand? Wes No
B. Where is this information? Barn House Office
C. Is this information always available to you? The No
DECONTAMINATION SUPPLIES
21. Is there water soap, available all day?
18 so, where? bathroom
Is this location more than 1/4 mile from the work site? Yes PNo (Inspector verify, if worker does not know.)
22. Is there drinking water available? Ves No
If yes, is it separate from the wash water? The No

EARLY ENTRY

23. Ha you ev	er told to enter su A. If ves, were v	ch an area soon afi ou informed abou	a of a greenhouse soo ter a pesticide was use t safety information p ptoms of poisoning, n	ed? U Yes UNO ertaining to the pest		or were

Article 33 and 6NYCRR 325

Assignment: Routine

Inspection Report: 092010GD901 Date of Inspection: September 20, 2010 Date of Report: September 22, 2010

Facility Inspected:

Coulter Farms LLC

Person Inspected:

David Coulter

Inspection Site:

3871 North Ridge Road

Lockport, New York 14094

(716) 433-5335

BACKGROUND

This was a routine inspection. The following inspections were performed: Agricultural Use Observation (AUO*), Certified Applicator Records (CAR), Restricted Dealer Records (RDR), Market Place Inspection (MPI), and Worker Protection Standard (WPS).

OPENING CONFERENCE

On September 20, 2010 at 1:00pm I, Gregory R. Davis, Pesticide Control Specialist I, #GD9 and Michael Nierenberg, Pesticide Control Specialist II, #331, identified ourselves, presented our New York State credentials, and I issued a Notice of Inspection to Mr. David Coulter, Member of Coulter Farms LLC. Also present was Mr. Jeffrey C. Hall, also a Member, and Mr. John King, sales representative of Crop Production Services. Crop Production Services is the supplier of pesticide products to Coulter Farms LLC, where they are resold. Mr. King observed our inspection for about 40 minutes and as we had no questions for him, he departed.

THE INSPECTION

Pesticide Certification:

This facility employs two Private Certified Applicators. David Coulter, certification identification number P9-837734, certified in category 22 - Fruit, with an expiration date of 01/21/2015, and Jeffrey C. Hall, certification identification number P9-476380, certified in category 22 - Fruit, with an expiration date of 09/21/2013.

Use Observation:

I conducted an Agricultural Use Observation (AUO*) from the pesticide application records and by interviewing Mr. Hall, the pesticide applicator who conducted the application. The application records were found to be complete and in compliance. "Tombstone Helios", EPA registration number 34704-978, a Federally restricted product, was applied on September 17, 2010 to 2.05 acres of sweet corn to control Fall Army Worm. It was applied at the rate of 2.8 ounces per acre, the same rate that is indicated on the label. The label also indicated a restricted entry interval of 12 hours. All other label directions were followed.

Mr. Hall uses a hose to fill his 100 gallon spray tank with water supplied by the Town. I indicated to both Mr. Coulter and Mr. Hall that a fixed pipe air gap between the discharge pipe and top of tank is required to comply with Regulations 325.2(c), thus eliminating the need for a back flow prevention device. They indicated that they would add one to the side of the shop where the mixing is done.

After viewing the pesticide storage area I completed an URPCEP checklist with Mr. Hall, with no problems found.

Worker Protection Standard:

The tier I worker protection standard part of the inspection was carried out by Michael Nierenberg, (PCS II, #331).

The principal crops at this 90 acre farm are sweet corn and strawberries. There is one seasonal handler at this establishment. There are 2 permanent workers and approximately 5 seasonal workers employed by the facility.

The Central Location was located in the break room of the spray barn. This is the building where the pesticide 'spray' products are located for sale on one end of the building and the office, sales room, break room and restroom are in a separate section on the other end of the building. The required EPA safety poster was displayed with the proper emergency medical information on it. The pesticide application information was properly displayed as well on a clip board on the wall.

There have been no pesticide exposure incidents at the facility, but both Mr. Hall and Mr. Coulter indicated that either one of them would be the person responsible for providing transportation to an emergency medical facility if an employee did become sick or injured by pesticides.

No custom pesticide applications are made at this facility.

Mr. Coulter explained that the handler and workers are trained on an annual basis by himself using video training devices. Mr. Coulter maintains a roster documenting each person trained, to assure all workers and handlers have been trained every five years.

This location has a decontamination site near the central location, plus a trailer device containing a 20 gallon water tank, soap and towels, which is used out on the farm so that it is within a 1/4 mile from where workers are working. There was also an eye wash bottle in a shed near the mix/load site where other PPE items were also stored. Handlers also carry coveralls in a plastic bag in their tractors, to serve as a clean change of clothing in case their work clothes become contaminated with pesticides. The handlers remove their personal protective equipment and wash at the decontamination site near the mix load area.

Workers are notified of pesticide applications orally and if necessary by posted notification. Mr. Coulter showed us he has the approved notification signs that he utilizes if required by the pesticide label.

All personal protective equipment is maintained and provided by Mr. Coulter or Mr. Hall. Mr. Nierenberg checked the product label from the AUO* and found that all required personal protective equipment was available and utilized.

Mr. Nierenberg then conducted worker interviews with the five workers from Mexico that were available on the farm at the time we were there. All workers spoke enough English to understand the interview questions. All the workers indicated that they were trained about pesticide safety, knew about the information in the Central Posting Area, and were aware of the decontamination supplies available.

Market Place/Restricted Dealer Records:

While Mr. Nierenberg was conducting worker interviews, this inspector checked the sales and inventory records of a couple pesticide products with Mr. Coulter and Mr. Hall. Mr. Hall showed the beginning inventory of both "Proaxis" insecticide, EPA Registration number 74921-3-34704 and "Tombstone" insecticide, EPA Registration number 34704-912. He then showed me the sales records that indicated sales of both of these Federally Restricted Use products. He showed color copies of the Pesticide Certification ID cards of the customers that purchased these products, showing that the customers were currently certified. Next, Mr. Coulter showed me the location of the current stock of the two products, and the quantity matched the amount of product from the beginning inventory minus the sale amounts.

The last task was to check the registration status of pesticide shelf stock offered for sale to the public. All products were found to be registered as required by New York State.

CLOSING DISCUSSIONS

I reviewed all completed inspection paperwork with Mr. Coulter and provided him with copies of each document. I had him read and sign the Inspection Report Cover Sheet and provided him with a copy of said document. This concluded the inspection. We thanked him and Mr. Hall for their time and left the premises.

September 24, 2010

Mr. David Coulter Coulter Farms LLC 3871 North Ridge Road Lockport, New York 14094

Dear Mr. Coulter:

On September 20, 2010, Pesticide Control Specialists with the New York State Department of Environmental Conservation, Buffalo Regional Office, in carrying out the provisions of the New York State Environmental Conservation Law (NYS ECL), conducted an inspection of Coulter Farms LLC, Lockport, NY, of which you are a member, to determine if various laws, rules, and regulations relating to the application of pesticides were being followed according to the requirements of the NYS ECL and the New York State Code of Rules and Regulations (NYCRR). The purpose of this letter is to advise you of the Department's summary of the inspection, to point out any violations noted, and to request any corrective actions necessary.

NYCRR Part 325.2 (c) requires all equipment containing pesticides and drawing water from any water source shall have an effective anti-siphon device to prevent back flow into the public water supply. No "approved" anti-siphon or fixed pipe air gap devices were observed on your pesticide application equipment or at your fill station on site. This was discussed with you during the inspection, and it is our understanding that you will install a permanent air gap filling system immediately. I have included information regarding anti-siphon devices and fixed pipe filling systems for your information.

As an enforcement agency, the Department is compelled by the NYS Legislature to initiate enforcement actions, and to assess penalties, when it is determined that violations of the ECL have occurred. The amount of the penalties is prescribed in the law under Article 71 Section 71-2907, which states that any individual who violates any provisions of Article 33 of the ECL shall be liable for a civil penalty not to exceed \$5,000.00 for a first violation, and not to exceed \$10,000.00 for a subsequent offense.

However, the Department has the ability to exercise enforcement discretion and issue, in this case, this minor offense "Warning Letter." This enforcement discretion is the result of a routine assessment of the Department's enforcement priorities and your willingness to correct the

Mr. David Coulter September 24, 2010 Page 2

violations, and should not be perceived as an acceptance of the violation alleged above. Should you be found to be applying pesticides in the future in violation of this warning, additional penalties, plus those suspended by this warning, will be assessed.

We appreciate your cooperation during the inspection and the fact that you have obviously made a commitment to comply with New York State laws, rules and regulations. If you have any questions regarding this inspection, or pesticide laws and regulations in general, please contact me at 851-7220.

Sincerely,

Glenn Reinhardt

Pesticide Control Specialist II
